

MAPLE SPORTS FLOORS

THE HEALTHY CHOICE FOR ATHLETES AND CHILDREN

Natural hardwood is one of the most prominent renewable resources on the planet. It is not only renewable, biodegradable, and recyclable, but also sequesters carbon before, during and after harvest, helping to mitigate climate change.

Maple Sports Flooring

Wood Alternatives

- **Maple wood floors do not contain toxic organochlorines** that can release in indoor sports environments
- **Maple hardwood will maintain 80%** of its sequestered (stored) carbon over its lifetime (200+ years)
- **The average MFMA Maple sports floor** stores 51 metric tons of CO₂ keeping it out of the environment for the lifetime of the floor and beyond
- **Sustainable forest management** practices result in net-zero carbon emissions
- **Maple hardwood has a lower carbon footprint** and lower Global Warming Potential (GWP) than alternatives

MITIGATING CLIMATE CHANGE
